                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SSUE-PI
Isoid=P58335-4; Sequence=VSP_008346;
Note=No experimental confirmation available;
TISSUE SPECIFICITY: Expressed in colon, heart,
liver, peripheral blood leukocytes, placenta,
small intestine and spleen.
DOMAIN: Binding to PA seems to be effected thr
SIMILARITY: Belongs to the ATR family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         FUNCTION: Cellular role is not yet known.

SUBUNIT: Binds to the protective antigen (PA) of Bacillus anthracis in a divalent cation-dependent manner, with the following preference: calcium > manganese > magnesium > zinc.

Seems to bind to collagen type IV and laminin.

SUBCELLULAR LOCATION: Type I membrane protein (isoforms 1 and 2).

Secreted (isoform 3). Isoform 1 is expressed at the cell surface while isoform 2 is predominantly expressed within the endoplasmic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ALTERNATIVE PRODUCE Event=Alternative

Integrin alpha-D precursor.
                                                                                                                                                                                                                                                                                                                                                         -!- SUBUNIT: Heterodimer of an alpha and a beta subunit. Alpha-D associates with beta-2 (By similarity).
-!- SUBCELLULAR LOCATION: Type I membrane protein (By similarity).
-!- DOMAIN: The integrin I-domain (insert) is a VWFA domain. Integrin Lomains do not undergo protease cleavage.
-!- SIMILARITY: Belongs to the integrin alpha chain family.
-!- SIMILARITY: Contains 7 FG-GAP repeats.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         chondroitin-sulfate type (By similarity).

SIMILARITY: Belongs to the fibril-associated collagens with interrupted helices (FACIT) family.

SIMILARITY: Contains 18 fibronectin type III domains.

SIMILARITY: Contains 1 TSP N-terminal (TSPN) domain.

SIMILARITY: Contains 4 VWFA domains.

subunits and a calcium binding site on its lower surface.",
Proc. Natl. Acad. Sci. U.S.A. 95:4870-4875 (1998).
-I- FUNCTION: Integrin alpha-M/beta-2 is implicated in various
adhesive interactions of monocytes, macrophages and granulocytes
as well as in mediating the uptake of complement-coated particles.
It is identical with CR-J, the receptor for the iC3b fragment of
the third complement component. It probably recognizes the R-G-D
peptide in C3b. Integrin alpha-M/beta-2 is also a receptor for
fibringen, factor X and ICAM1. It recognizes Pl and P2 peptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Baldwin B.T., Sarver R.W., Bryant G.L. "Large and small splice variants of collagen XII: differential
expression and ligand binding.";
J. Cell Biol. 130:1005-1014(1995).
-!- FUNCTION: Type XII collagen interacts with type I collagen-
containing fibrils, the COLl domain could be associated with
surface of the fibrils, and the COL2 and NC3 domains may be
localized in the perifibrillar matrix.
-!- SUBUNIT: Trimer of identical chains each containing 190 kDa o
nontriple-helical sequences.
-!- ALTERNATIVE PRODUCTS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       STRAIN=White leghorn;

DOMAIN: This sequence defines five distinct helical domains (COL1 and COL2) and three no domains (NC1, NC2, and NC3).

PTM: The triple-helical tail is stabilized between the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of the triple of triple of the triple of the triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple of triple o

TISSUB SPECIFICITY: Type XII collagen is present in tendons,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Event=Alternative splicing; Named isoforms=2; Comment=The final tissue form of collagen XII may contain homotrimers of either isoform Long or isoform Short or any combination of isoform Long and isoform Short. Only isoform is a proteoglycan. Isoform Long has more restricted expressin embryonic tissue than isoform Short;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               IsoId=P13944-1; Sequence=Displayed;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        atl.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat disease of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activity, Cancer diagnosis and therapy, drug screening, assays for receptor activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders. Note: The sequence data for this patent did not form part of the printed specification
New TANGO 197 and/or TANGO 216 fusion polypeptides for preventing cameliorating symptoms of anthrax comprises a von Willebrand factor
                                                                                                        WPI; 2003-720708/68
N-PSDB; ADI00557.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    fusion; von Willebrand factor A-like domain; vWF; antibacterial; cutaneous; inhalation anthrax; human; TANGO 197 HisTag fusion; mutant;

The polypeptide of the invention demonstrates antibacterial activities whilst the composition and method may be useful in preventing or ameliorating the symptoms of cutaneous and/or inhalation anthrax. The current sequence is that of the human TANGO 197 HiaTag fusion protein of the invention.
                           New TANGO 197 and/or TANGO 216 fusion polypeptides for preventing camelicating symptoms of anthrax comprises a von Willebrand factor domain (vWF) amino acid sequence and an amino acid sequence heterol to the vWF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    domain

Also described as method of preventing or ameliorating a symptom of anthrax in a subject thought to be at risk for exposure to or suspected of having been exposed to Bacillus anthracis; and a pharmaceutical composition comprising the novel fusion polypeptide. The composition and method are useful in preventing or ameliorating symptoms of cutaneous and/or inhalation anthrax. This is the amino acid sequence of a fusion protein comprising mature human TANGO197, thrombin cleavage site and his tag that can be used to treat exposure to or
               Novel nucleic acid sequences encoding TANGO-128, 140, 19 and 239 polypeptides useful for the treatment of asthma, arthritis, psoriasis and autoimmune diseases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Lyme's disease, cachexia and autoimmune diseases e.g. myasthemia gravis, autoimmune diabetes and systemic lupus crythematosus. The nucleic acids are also useful for producing transgenic animals and the TANGO polypeptides themselves. Partial TANGO-128, 140, 197, 212, 213, 224, 239 sequences are useful in forensic biology, for diagnostic assays, pharmacogenomics and for monitoring clinical trials. TANGO polypeptides are suitable for both prophylactic and therapeutic methods for treating a subject at risk of a disorder or having a disorder associated with aberrant TANGO expression. A wide range of cellular disorders can be treated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           08-JAN-2003
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ABP54905 standard; protein; 333
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 333 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Nucleic acids encoding TANGO polypeptides are useful as modulating agents for regulating cellular processes like asthma, graft versus-host disease, rheumatoid arthritis, psoriasis, inflammatory bowel disease, septic shock, ulcerative colitis, Crohn's disease, chronic myelogenous

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cc as a human anthrax toxin receptor (ATR) polypeptide on the basis of cc identity to a newly isolated human ATR (see ABP34903). The 2 polypeptides cc are identical between amino acids 1-317, but differ thereafter at the C-cc terminus. The present polypeptide, encoded by IMAGE CLONE 4563020, has no cc previously known function, and there has been no prior indication that it is a complete or partial ATR. The invention provides ATR polypeptides and cp polynucleotides, vectors, host cells, and transgenic and knock-out cc animals. It also provides methods for identifying molecules that bind the ATR and which reduce the toxicity of anthrax toxin. A claimed method for trating anthrax in a human or animal involves administering an agent that inhibits binding between anthrax toxin protective antigen (PA) and CC ATR at a level effective to reduce the severity of anthrax. Suitable cagents include the present polypeptide or a PA-binding fragment of it, a cc PA-binding polypeptide at least 80% identical to these, a fusion protein, a nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         5

von Willebrand factor A-like domain amino acid sequence;
vWF amino acid sequence; anthrax; Bacillus anthracis; cutaneous anthrax;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a novel fusion polypeptide comprising a von Willebrand factor A-like domain (vWP) amino acid sequence and an amino acid sequence heterologous to the vWP. The polypeptide of the invention demonstrates antibacterial activities whilst the composition and method may be useful in preventing or ameliorating the symptoms of cutaneous and/or inhalation anthrax. The current sequence is that of the human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New TANGO 197 and/or TANGO 216 fusion polypeptides for preventing or ameliorating symptoms of anthrax comprises a von Willebrand factor A-like domain (vWF) amino acid sequence and an amino acid sequence heterologous to the vWF.
New TANGO 197 and/or TANGO 216 fusion polypeptides for preventing ameliorating symptoms of anthrax comprises a von Willebrand factor

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention describes a fusion polypeptide comprising a von Willebrand factor A-like domain (vWF) amino acid sequence and an amino acid sequence heterologous to the vWF. Also described are: a method of preventing or ameliorating a symptom of anthrax in a subject thought to be at risk for exposure to or suspected of having been exposed to Bacillus anthracis; and a pharmaceutical composition comprising the novel fusion polypeptide. The composition and method are useful in preventing or ameliorating symptoms of cutaneous and/or inhalation anthrax. This is the amino acid sequence of a human von Willebrand factor A-like domain (vWF) amino acid sequence TANGO197.
                                                                                                                                                                                                                                                            (ROTT/)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a novel fusion polypeptide comprising a von Willebrand factor A-like domain (vWP) amino acid sequence and an amino acid sequence heterologous to the vWP. The polypeptide of the invention demonstrates antibacterial activities whilst the composition and method may be useful in preventing or ameliorating the symptoms of cutaneous and/or inhalation anthrax. The current sequence is that of the human TANGO 197 FLAG fusion protein of the invention.
                                              New TANGO 197 and/or TANGO 216 fusion polypeptides for preventing or ameliorating symptoms of anthrax comprises a von Willebrand factor A

Also described are: a method of preventing or ameliorating a symptom of anthrax in a subject thought to be at risk for exposure to or suspected of having been exposed to Bacillus anthracis; and a pharmaceutical composition comprising the novel fusion polypeptide. The composition and method are useful in preventing or ameliorating symptoms of cutaneous and/or inhalation anthrax. This is the amino acid sequence of a fusion protein comprising human TANGO197 and FLAG that can be used to treat exposure to or prevent a symptom of anthrax.
New TANGO 197 and/or TANGO 216 fusion polypeptides for preventing cameliorating symptoms of anthrax comprises a von Willebrand factor

The polypeptide of the invention demonstrates antibacterial activities whilst the composition and method may be useful in preventing or amellorating the symptoms of cutaneous and/or inhalation anthrax. The current sequence is that of the human TANGO 197 HiaTag fusion protein of the invention.
                       New TANGO 197 and/or TANGO 216 fusion polypeptides for preventing amellorating symptoms of anthrax comprises a von Willebrand factor domain (WF) amino acid sequence and an amino acid sequence hetero to the vWF.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  domain
